

BEAUTY OF THE NIGHT

The Lumi-O solution has been around since 1982 and allows you to brighten and beautify your backyard at night with an innovative lighting system for your above ground pool.

Safe and stylish, the Lumi-O lighting system is a high quality product that has been sold to thousands of pool owners in Canada and the United States.

Lumi-O is the only manufacturer to unite a team of expert technicians on the road and a call center to offer you an outstanding service.

Whether it's for a new pool installation, a liner change or a simple LED upgrade, **we are the experts in installation, maintenance and repair.**

Add a new perspective and create a unique atmosphere around your pool that can only be achieved with light.

When summer is here... Make the most of it with the lighting system of your choice!

With an innovative vision, Lumi-O has designed other product lines, such as pool steps and ladders as well as rotomolded spas that can be plugged into a standard 120 V outlet.

Brighten up your evenings

**WITH IN-GROUND
POOL LIGHTS**

WHITE LUMI-DEL

Provides **bright white lighting**, an **energy efficient system** and helps **keep the pool safe** and well illuminated at night.

COLOR LUMI-DEL

Offers a **dozen color set**. You can choose a mode according to your mood: blue, green, red and more while determining a choice of changing colors at a **progressive interval** for a peaceful evening or on the **flashing mode** for a successful party. Manage it all with the **remote control or the switch**.

CONVENTIONAL LIGHT

If you already have the conventional Lumi-O, it is **possible to convert (retrofit) to Lumi-LED**, either in color or in white, as described above.

A technician will take care of it for you!

WARRANTIES

Lumi-LED: **3 years** from the installation date by our technician (the conventional bulb is not guaranteed).

Remote control, circuit breaker, transformer and installation: **1 year**.

For your light's warranty to be valid, you must follow the WINTER MAINTENANCE procedures.

IMPORTANT

Never turn on the light when the water level is below the glass as the heat from the bulb could damage the parts. Water cools the glass.

AQUA LEVEL

Here is the new guardian of your water level.

It is an automatic water supply system connected to the pool and to a water inlet by hoses that controls the level and ensures the supply of the pool by means of a check valve placed at the bottom of the tank, without electricity, like a bathroom cabinet system (toilet).

Before closing your pool for the winter, disconnect the Aqua Level and hoses to observe the actual water level and detect any possible leaks and abnormalities in the pool.

WINTER MAINTENANCE

CONVENTIONAL LIGHT

- **Loosen the butterfly screw** under the light (**do not remove it**);
- **Hold the light bulb** and **turn it a quarter of a turn** to **unhook if from the ring**;
- **Remove the light bulb** and **store it in a dry, warm place** if possible;
- To prevent the formation of verdigris and rust, **apply petroleum jelly** (vaseline or white grease) in the socket;
- **Place the lamp shell on the ground** if the wire is long enough or **hang it up on the ring**.

LED LIGHT

- **Loosen the 3 butterfly screws** around the light (**do not remove them**);
- **Hold the light bulb** and **turn a quarter of a turn** to **unhook the light from the ring**;
- Follow the wire to the "Quick-Plug", **unscrew the black bolt** and **separate the wires** (male/female);
- The **female wire must remain in place** and it is recommended to **use grease** (Vaseline) to avoid corrosion;
- **Store the light bulb in a dry, warm place** if possible.

NICHE

Prevent water from accumulating in the niche by removing any sand, soil or rock residue from the bottom of the housing.

REMOTE CONTROL

If installed outdoors, it is recommended that it be **unplugged and stored indoors**.

TRANSFORMER

It must **remain in place**.
